---

Get your hands on Flux, the newest YOOtheme template creation. Flux is based on the new [Warp5 Joomla template framework](#) and is designed with a chromish style which looks perfect for example for gaming sites.

"The new Warp template framework is amazing!"

Flux shines with its flashy menu bar, for which we once again used our amazing fancy menu: The menu items look like they are buttons pushed into the menubar. Also the [YOOsearch](#) and the breadcrumbs fit in perfect with the template design. Of course, Flux comes with our awesome new Warp5 menu that you might already know from our last template [Phoenix](#)

. It also allows you to publish modules in the dropdown menu and, like all our templates, it comes with loads of module variations.

### Warp5 Updates

We also added some new features to our Warp5 framework:

- The fancy menu effect is now also applied to modules published on the menu position.
- The effect of the fancy menu remains even when the cursor goes off the dropdown and back on again.
- You can assign individual widths for modules published in the dropdown via the Module Class Suffix, for example: dropdownwidth-255.
- You can set individual dropdown widths for menu items via the Page Class Suffix, for example: columnwidth-200.
- You can turn off background images for a specific menu via the Menu Class Suffix, for example: images-off.
- We also improved a few module templates.
